Hay Fever & Allergies

Bio-Resonance Therapy for Hay Fever & Allergies

When the word hayfever or allergy is mentioned people tend the think of streaming noses, sneezing, itchy eyes and shortness of breath. The respiratory tract is indeed the most common target of organ of acute and chronic allergic reactions. Symptoms range in intensity from slight itchiness in the nose through hayfever and chronic sinusitis to life-threatening bronchial asthma.

Classic allergy testing predominantly seeks out the inhalation allergens such as house dust mites, moulds, animal hair, pollen and fragrances. A good bioresonance therapist will not only search for the allergens triggering these symptoms but will also seek out and treat fundamental energetic disorders such as chronic food allergies, chronic toxic contamination and therapy blocks. Some children or those that have had suffered for a short period have time have experienced complete recovery others have experienced some relief.

The bioresonance method has become well-known for its ability to treat allergies swiftly and effectively. Word of it’s obvious success has rapidly spread amongst patients and consequently many allergy sufferers are seeking out the practices of bioresonance therapists. This is certainly attributable to the fact that the number of people suffering from allergies has been steadily increasing for years and many patients are disappointed in the options available in conventional medicine.

Bicom bioresonance has been used for over 20 years in the treatment of allergies. Allergies are now an extremely widespread condition. They can be tested and treated painlessly and without any harmful side-effects using the Bicom device. According to Dr. med. Rummel of Karlsruhe, allergies can play a central role with many chronic conditions. Dr. Rummel has summarised these conditions as follows in what is known as the group of allergic disorders:

Allergic sequence
Just like homeopathy, acupuncture and other methods of complementary therapy, Bicom bioresonance is a form of regulatory medicine. Within complementary medicine, Bicom bioresonance therapy is recognised as an effective tried and tested method. Within conventional medicine, however, Bicom bioresonance has not been subject to scientific research and is, therefore, not yet approved.

Skin Problems

Bio-Resonance Therapy for Skin Problems

The skin is the largest organ in our body.

Dermatological diseases

Skin disease, especially if it affects the face or other visible parts of the body, is an allergic symptom which is often regarded subjectively as particularly unpleasant. The disorder is impossible to hide from other people and fear of possible contagion may lead some sufferers to withdraw from social contact. Allergically induced rashes may affect only small areas of the body or extend throughout the whole body. Symptoms range in intensity from slight reddening of the skin through scaly for oozing eczema to ulceration. The symptoms are almost always linked with itching of varying severity. Scratching provide a short-term relief but usually aggravates the rash and can lead to additional infections. In conventional medicine is a distinction is made between acute or chronic skin eruptions and eczema neuronal dermatitis and some other clinical pictures. Treatment is usually topical; the cause generally unknown. Cortisone ointment certainly helps but only while it is applied. Numerous alternative therapists with many years of experience in this area have found that chronic food allergies to cow’s milk, or wheat, usually coupled with intestinal mycosis, plays a crucial role in neurodermatitis and chronic eczema. Many of these cases have been treated successfully using BICOM bioresonance therapy.

A Bicom bioresonance therapist will look at what is stressing your body from the inside rather than treat the symptoms, if the body is not eliminating toxins effectively they can come out of the skin which is an elimination organ. A typical session will include basic therapy, liver, lymph and kidney programs to help remove toxins from the body. It is important to remove stress such as parasites, candida and allergens, by removing these the body is under less stress and often skin conditions become much improved.
